

**Ecosystem 1**  
Woodlands

# Habitat Clues for **Woodland** Animals

**Red-necked wallabies** can be found near dense cover like tall grasses and shrubs.

**Short-beaked echidnas** like to hide and live underground in burrows.

**Damselflies** catch their prey mid-air, but rest on plants with their wings closed.

**Superb fairy wrens** pounce on their prey from fallen logs.

**Brown tree creepers** peck and probe for insects, on tree trunks and branches.

The **superb parrot** nests in hollows of trees.

The **eastern water skink** eats worms and insects that hide in fallen sticks and leaves.

The **turquoise parrot** flies from tree to tree looking for nectar.

The **blue tongue lizard** basks in the sun to keep warm.
